MVP of Analysis for Bank Loan To predict the paid loans

Objective :

The goal is to train the best machine learning model to maximize the predictive capability of deeply understanding the past customer's profile minimizing the risk of future loan defaults.

Project structure :

- EDA : Exploratory Data Analysis.
- Data Wrangling : Cleansing and Feature Selection.
- Machine Learning : Predictive Modeling.

The Dataset :

Data provided by Kaggle has been used in this project.

The Next Step :

I will apply the work steps for the project and if the result is excellent, I will develop it and apply it to any model that has been studied.
